

**Project: New Haven Urgent Care**

**Team#**

**Test Case ID#: 13**

**Test Date: 12/5/2020**

**Name(s) of Tester(s):  
John Hendrickson**

**Test Description (What are you testing? – you must be specific):**

does the system allow the patient to visit urgent care more than once?

**NOTE: The following information must be provided to be given credit for any test.**

**Test Data (Provide the file name of the script used to insert data, provide a screen capture to reflect data, or provide script here):**

test\_13\_two\_visits.sql

**SQL Query(s) used for testing:**

-- insert first visit record for 'John Smith'

insert into VISIT\_RECORD  
values ('12345678', '12345678', '12345678', '98765432');

-- insert second visit record for 'John Smith'

insert into VISIT\_RECORD  
values ('12345679', '12345678', '12345679', '98765432');

The output from inserting the second visit record for in VISIT\_RECORD 'John Smith is:

Result Grid   Filter Rows: <input type="text"/>					
#	Vid	lid	Aid	Pid	
1	12345678	12345678	12345678	98765432	
2	12345679	12345678	12345679	98765432	

This demonstrates that the same patient can visit the urgent care twice by creating two visit records with the same patient id of 98765432.

and we can see the second visit record for john smith has been inserted:

Action Output 					
	#	Time	Action	Message	Duration / Fetch
	1	20:29:29	insert into VISIT_RECORD values ('12345679', '12345678',...	1 row(s) affected	0.0013 sec
